

Why does Construction Industry need ERP Solution?

Now a days members of the Construction Industry are facing biggest challenges and need to meet today's market demands. To meet today's market demands, needs to manage information. In order to manage information/data, deliver high-quality information to the decision-makers at the right time and to automate the process of data collection, collation and refinement, organizations have to make information technology an ally and should utilize it in the best way possible.

This is the reason why all organizations are looking ERP package as a solution to their information management problems. ERP solution will provide a centralized approach to manage information/data aggregation and dissemination and ensures the long-term value of these firms.

ERP solution can lead to:

- Better Cash & Fund Management
- Streamlines and standardize all business processes and operations
- Maximum utilization of company resources
- Maintain log on project issues for record keeping and resolution
- The average inventory is considerably reduced
- Dashboards and metrics to monitor each level of project progress

- Accountability at each level of project progress
- To be able record major project tasks over the duration of the project
- Ability to track and analyze each task and operation
- Effective communication between all departments and attain maximum productivity
- Reduces costs and improves quality and efficiency delivering increased profits
- Enquiry conversions increased, by being able to respond to customers requirements quickly
- Usage of Manpower, Material, Plant and Machinery at sites is efficiently done & optimized
- Gives Assured Direct Savings to the tune of the Construction Turnover (Cost of Land, Material, Manpower, Other)
- Possible customer value in the future that has been created due to ERP implementation
- Track project budgets. To track at an individual project level and at a summary level.
- To have a built in work flow so that it is easy for the user to know what is to be done next for each task required.

CONCLUSION:

As a result Construction Industry needs an ERP Solution to gain all the benefits and to manage all the data and information accurately, timely and consistently. More importantly, Construction industry needs a standard and complete integrated system to consolidate and handle the data. Lack of such complete integrated system may affect badly for Construction Industries in the long run.

About Quadra Software Solutions:

QUADRA ERP is Researched, Designed, and Developed by construction functional experts with technical excellence of software professionals.
